SHOPPER AI — PROJECT SCREENSHOT REPORT

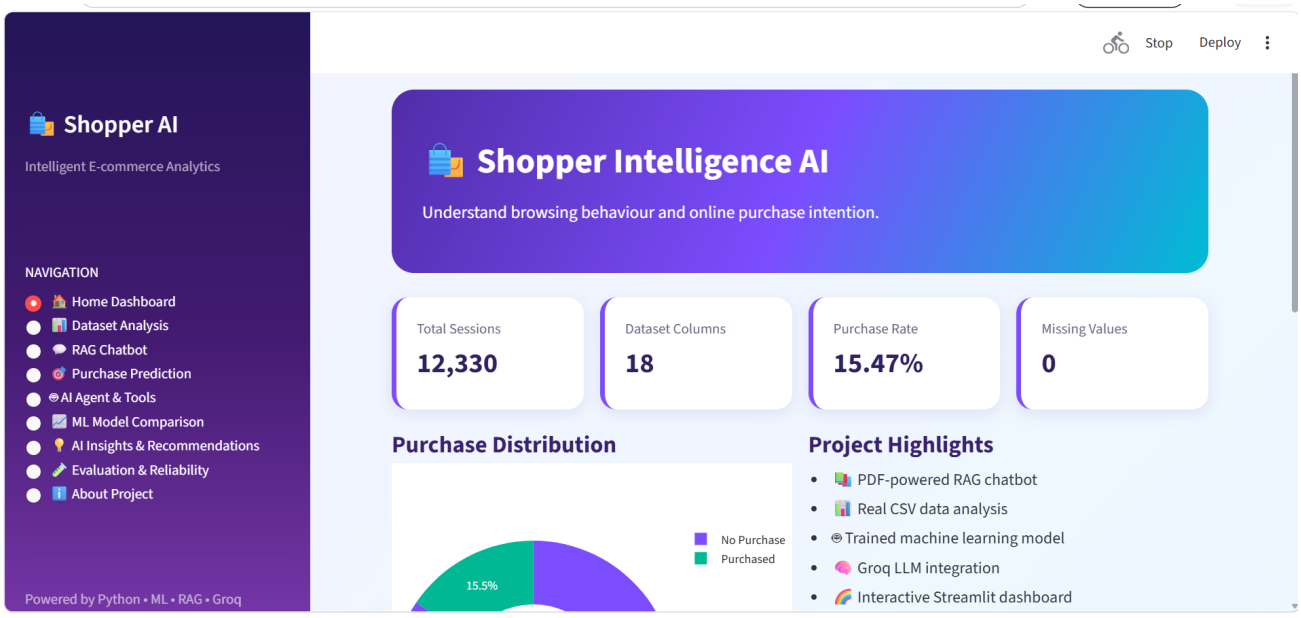

Autonomous Enterprise Intelligence for Online Shopping Behaviour

1. Project Dashboard

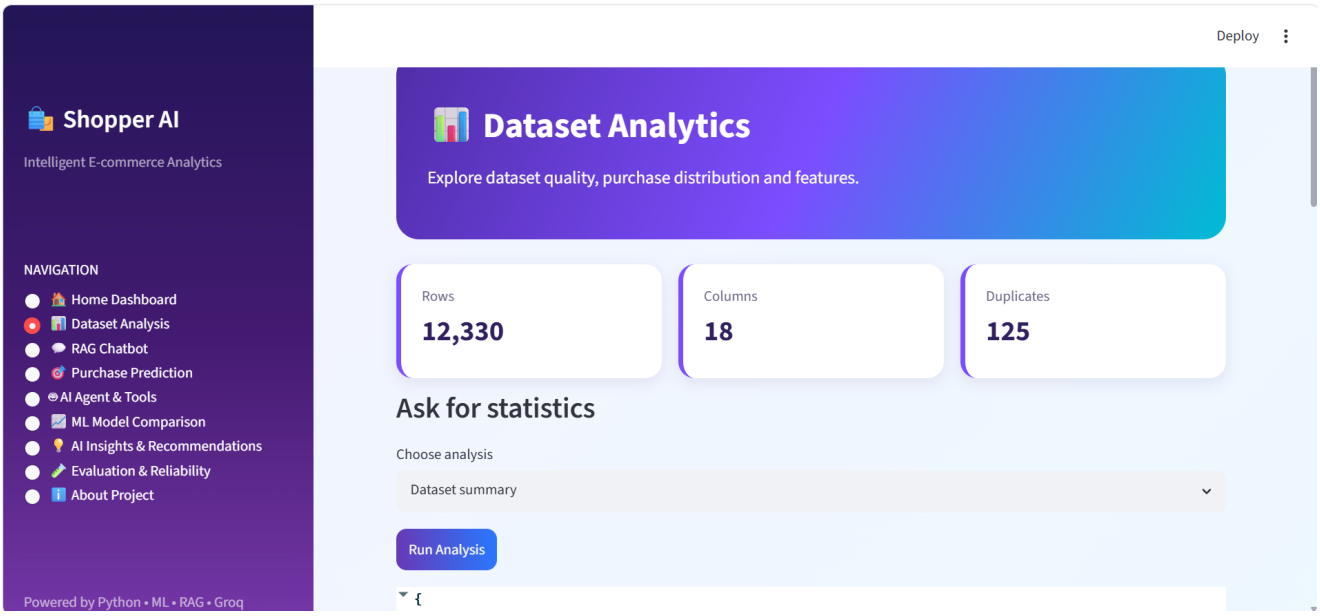

Shows the Shopper AI dashboard with session count, dataset columns, purchase rate, and missing-value summary.

2. Dataset Analysis

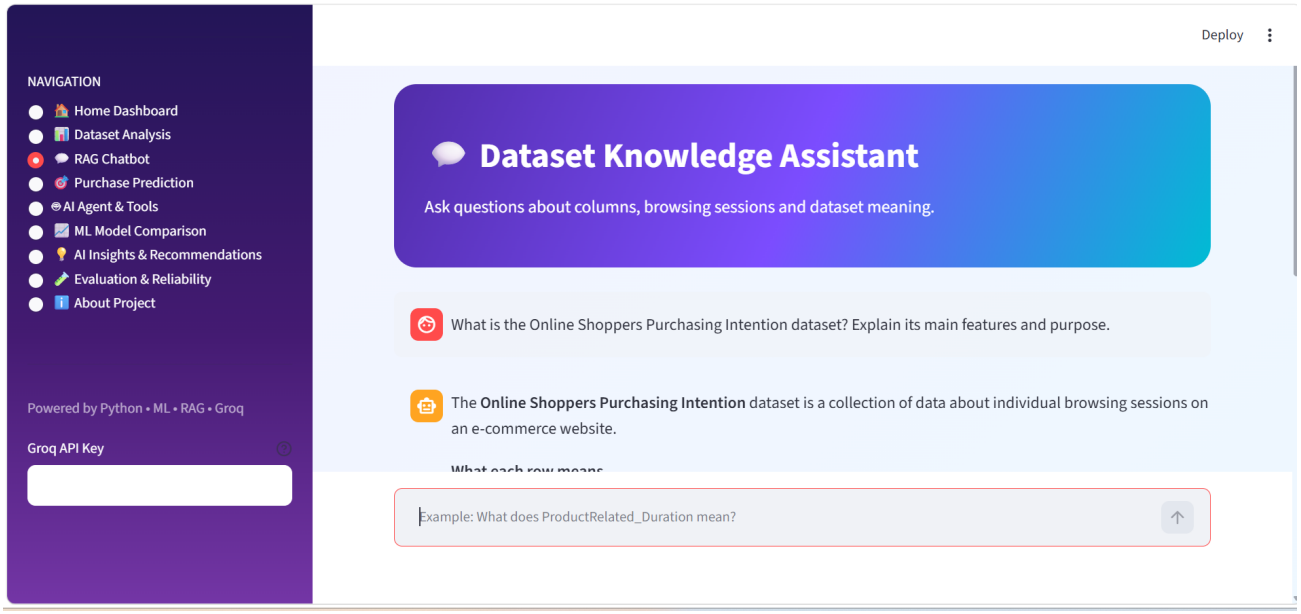

Displays dataset-level statistics and the controls used to run analysis on the shopping-session data.

3. RAG Chatbot

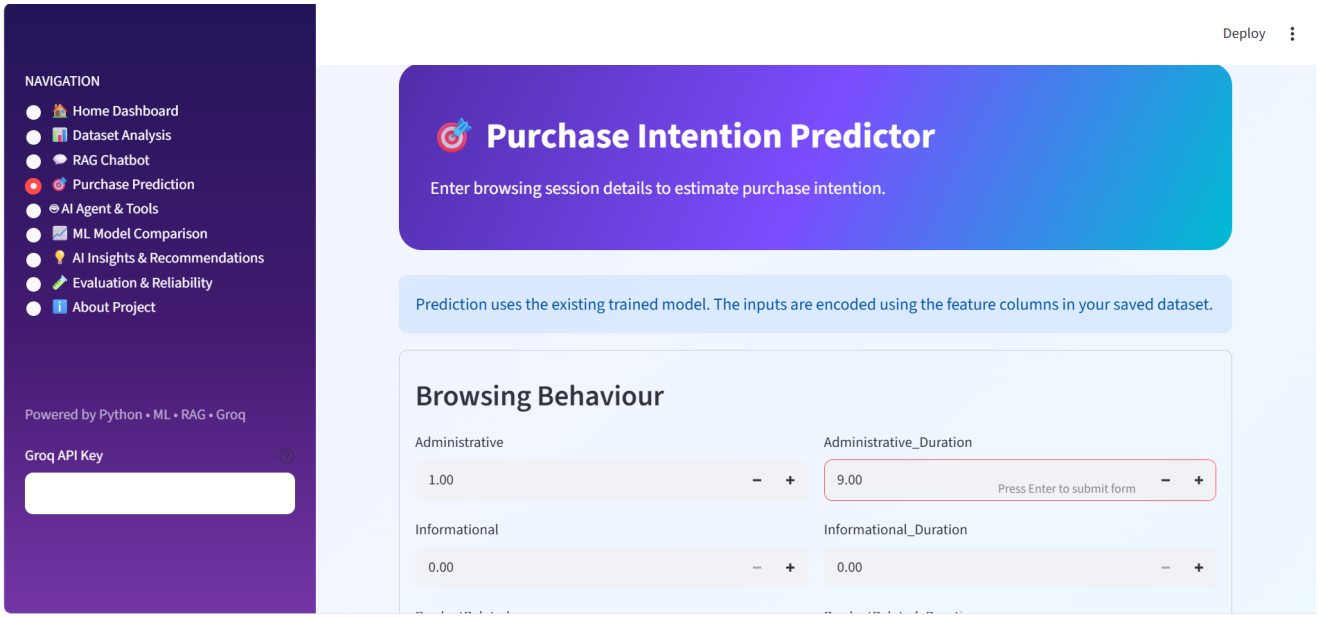

The chatbot answers questions using the dataset knowledge PDF and explains dataset concepts in natural language.

4. Purchase Prediction

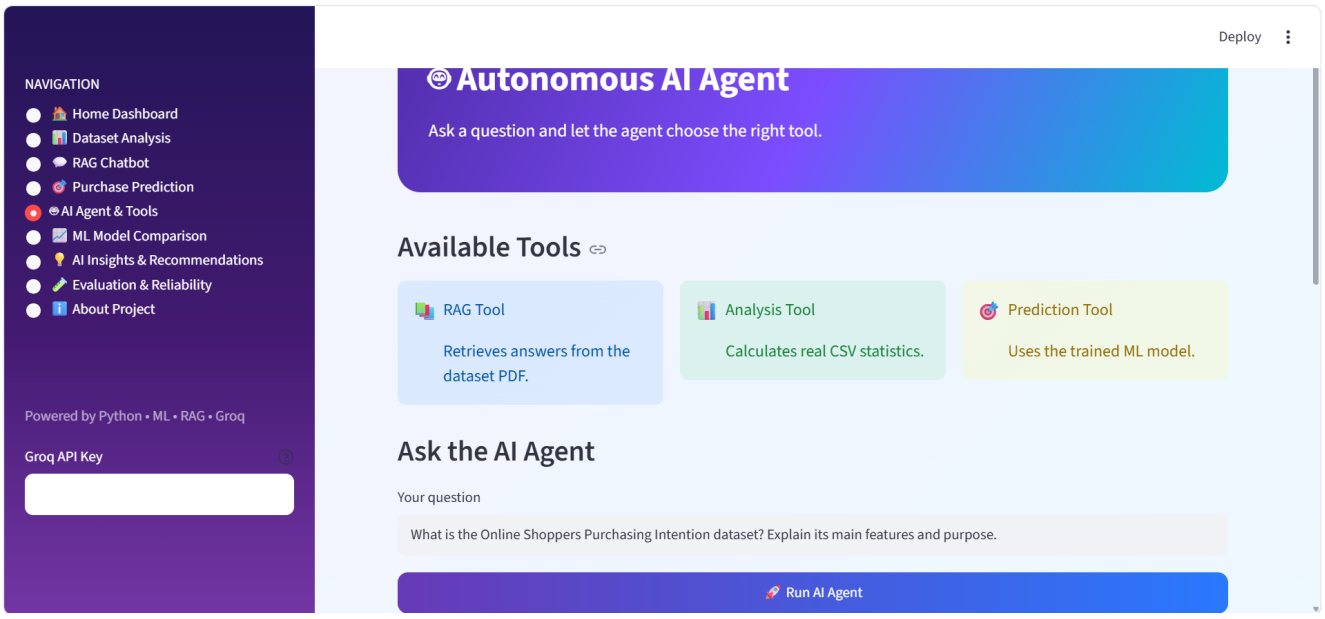

The prediction page collects browsing-session attributes and uses the saved machine-learning model to estimate purchase intention.

5. AI Agent & Tools

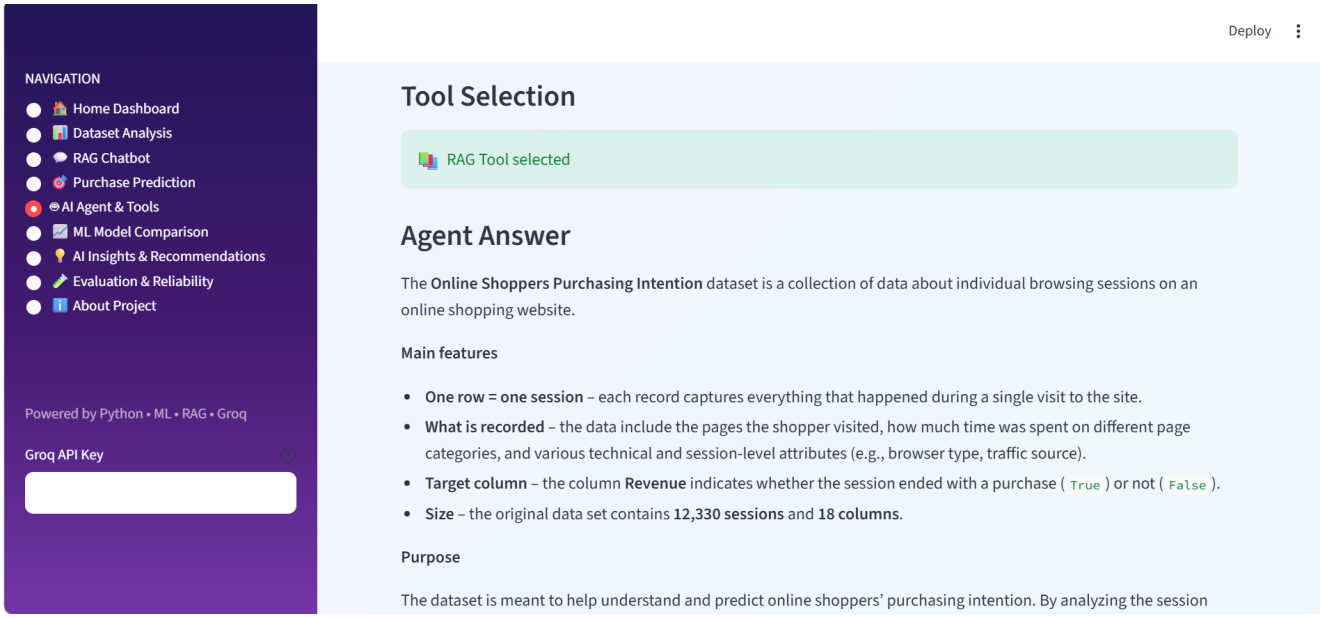

The agent selects a suitable tool—RAG, analysis, or prediction—based on the question entered by the user.

6. AI Agent Result

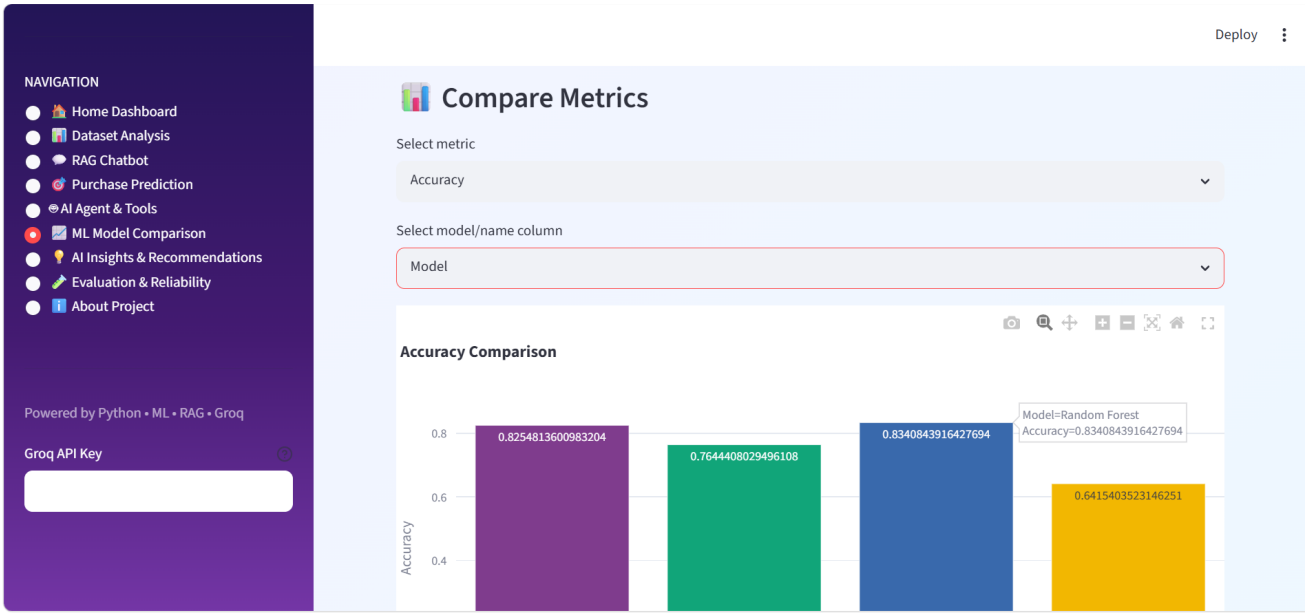

The displayed answer explains session-level features and the meaning of the Revenue target column.

7. ML Model Comparison

The comparison view charts evaluation metrics for Logistic Regression, Decision Tree, Random Forest, and KNN.

8. Evaluation & Reliability

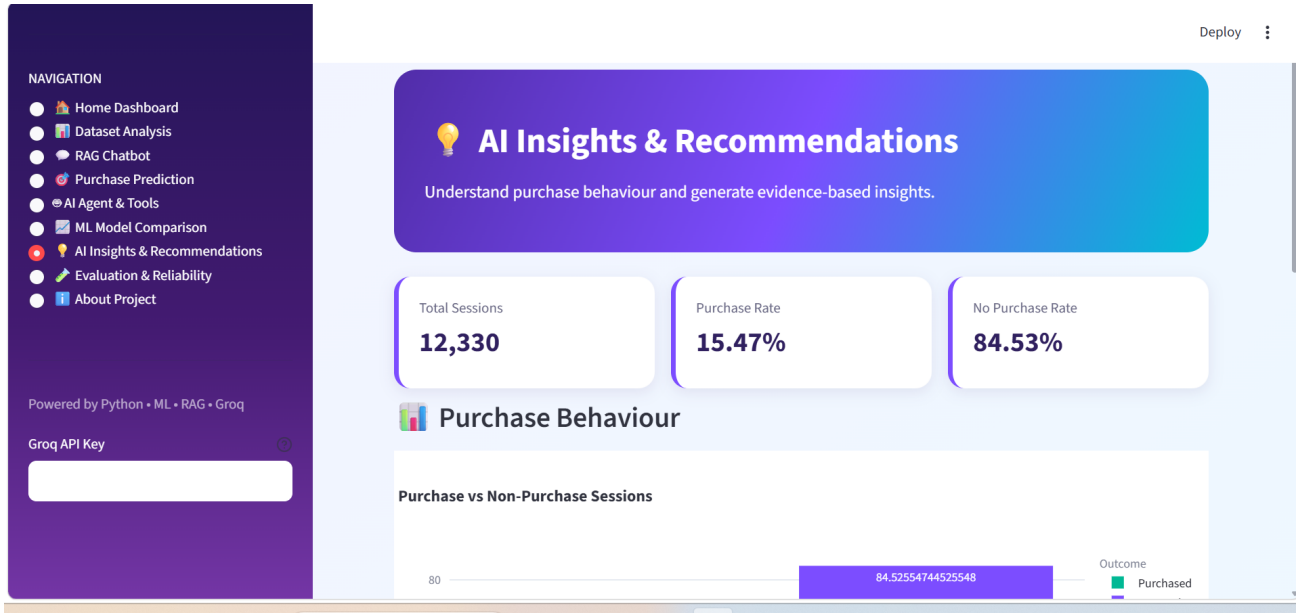

This page presents model metrics and saved evaluation plots, including the confusion matrix and outlier box plots.

9. AI Insights & Recommendations

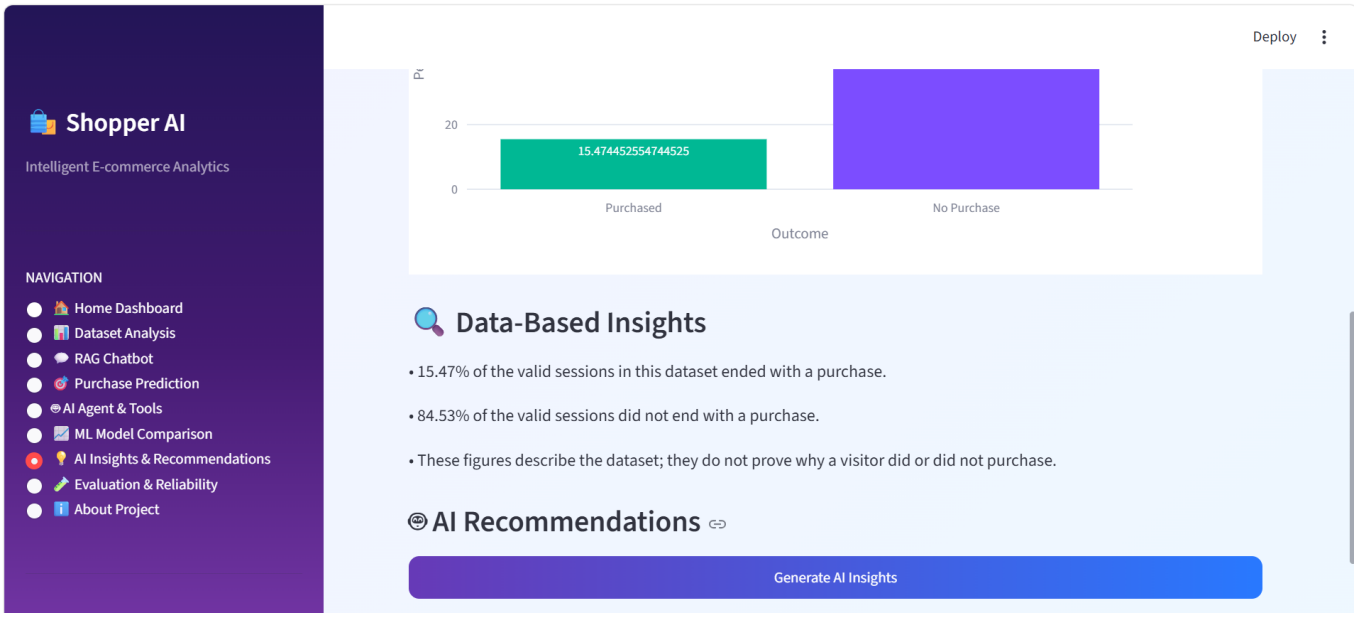

The page summarizes purchase and non-purchase rates and provides a control to generate AI-based insights.

10. About the Project

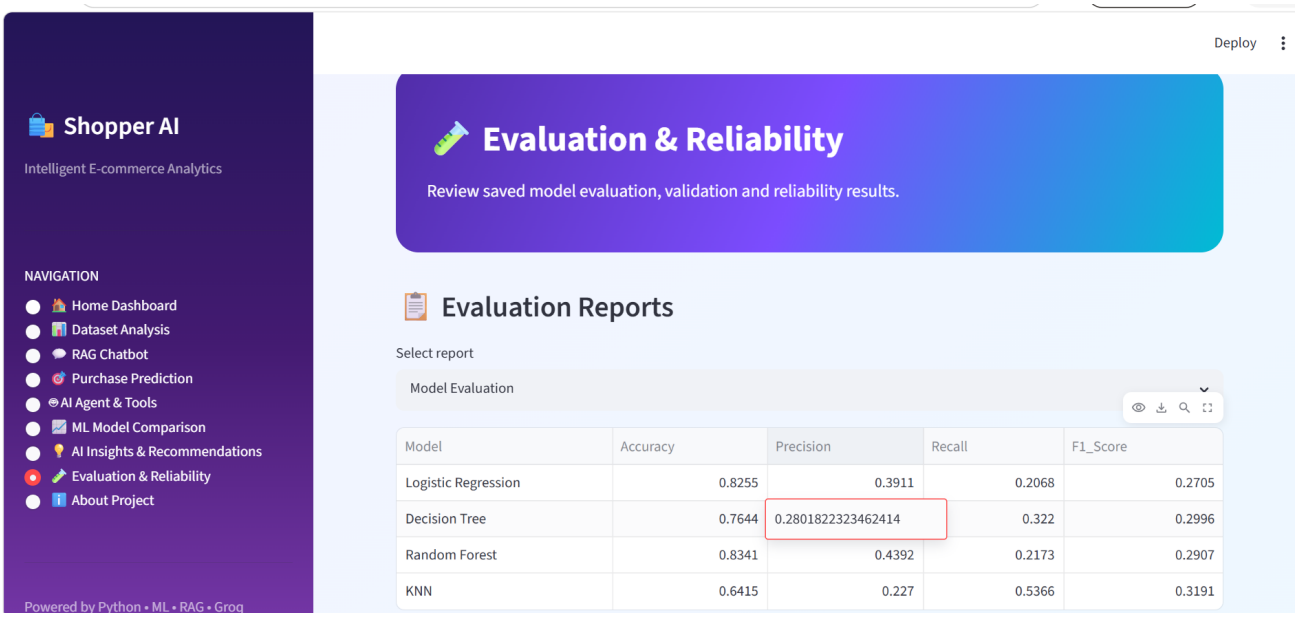

Summarizes the project objective, technology stack, workflow, and available project resources.

11. Metric Visualization

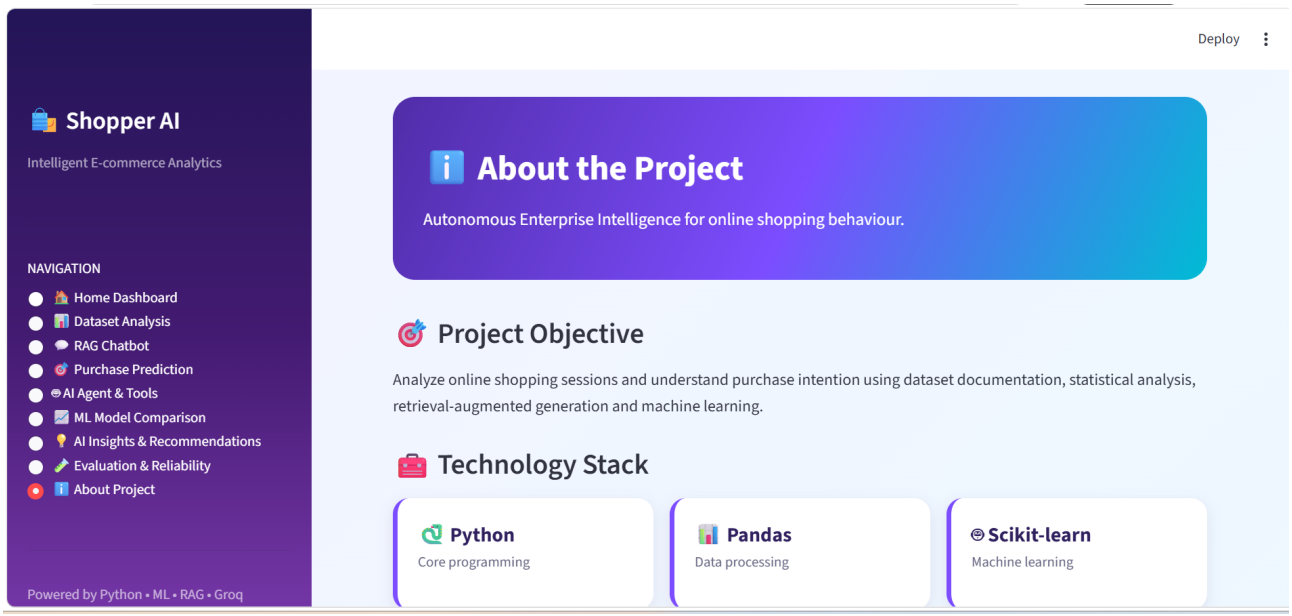

Shows a selectable metric chart so the model results can be inspected visually.

12. Model Evaluation Results

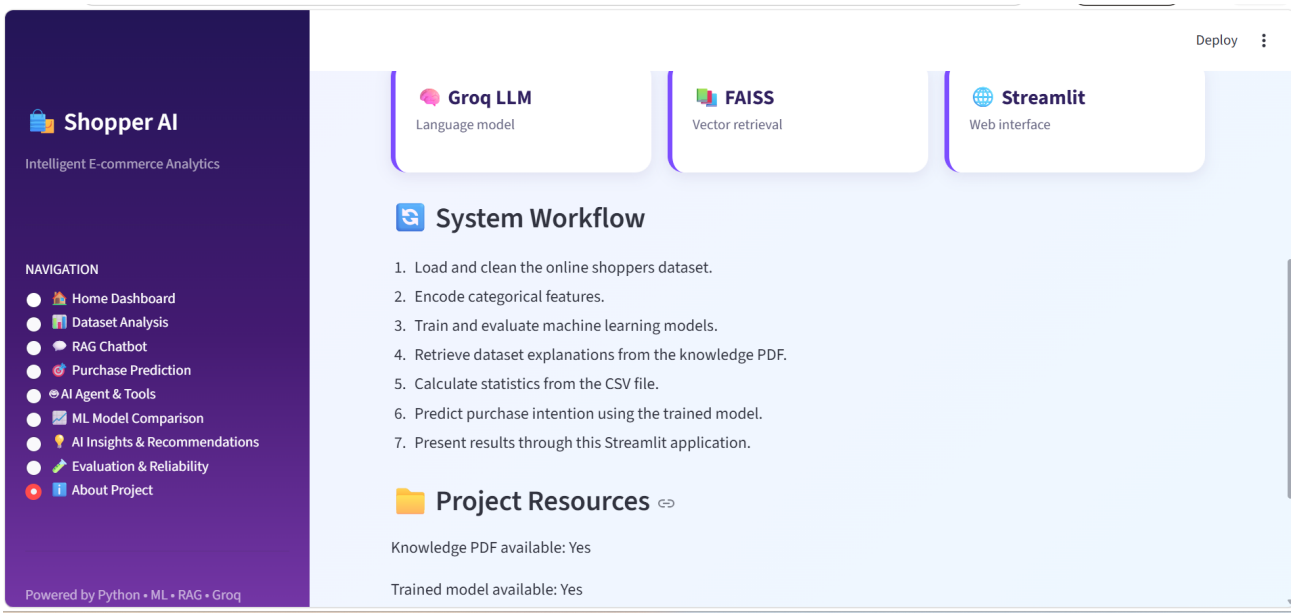

The evaluation table compares accuracy, precision, recall, and F1-score across the four models.

13. Cross-Validation Results

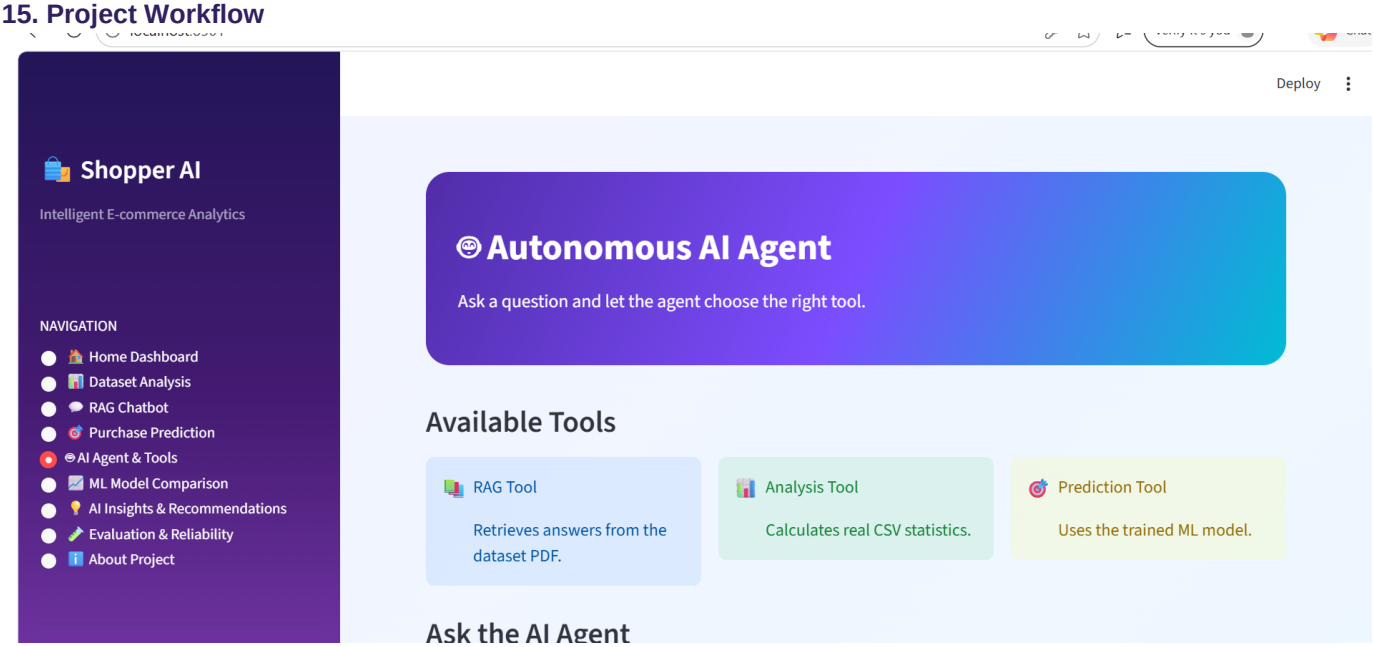

Displays cross-validation scores to help compare model performance beyond a single train-test split.

14. Saved Evaluation Plots

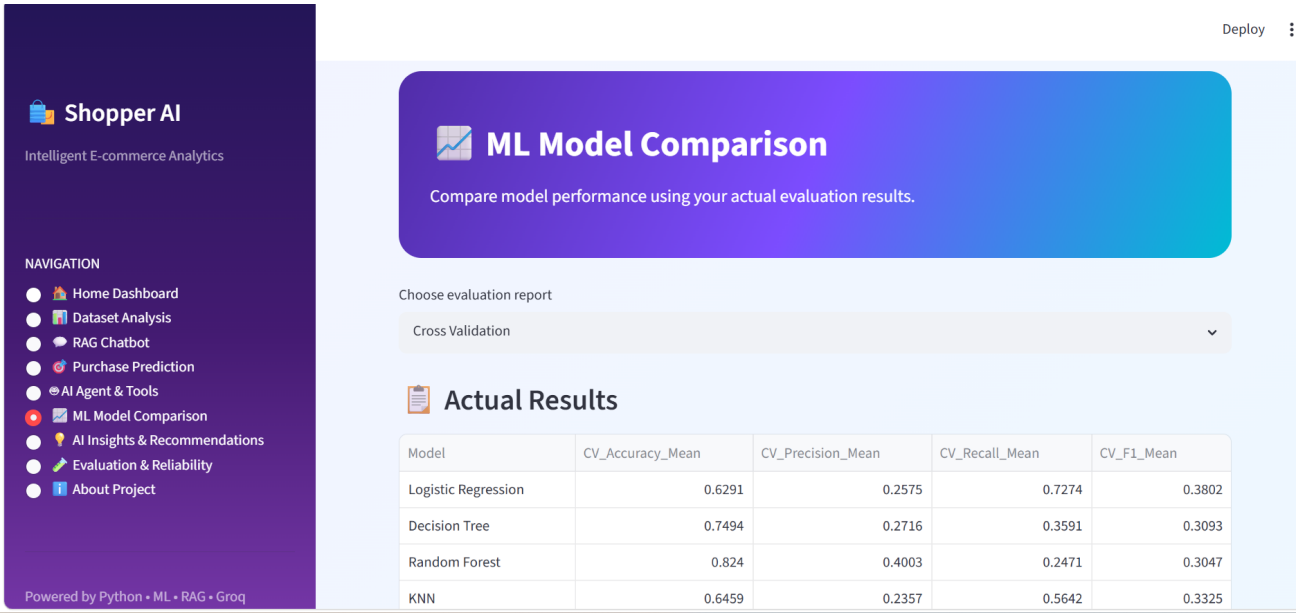

The saved plots support error analysis and help interpret classification results and feature outliers.

15. Project Workflow

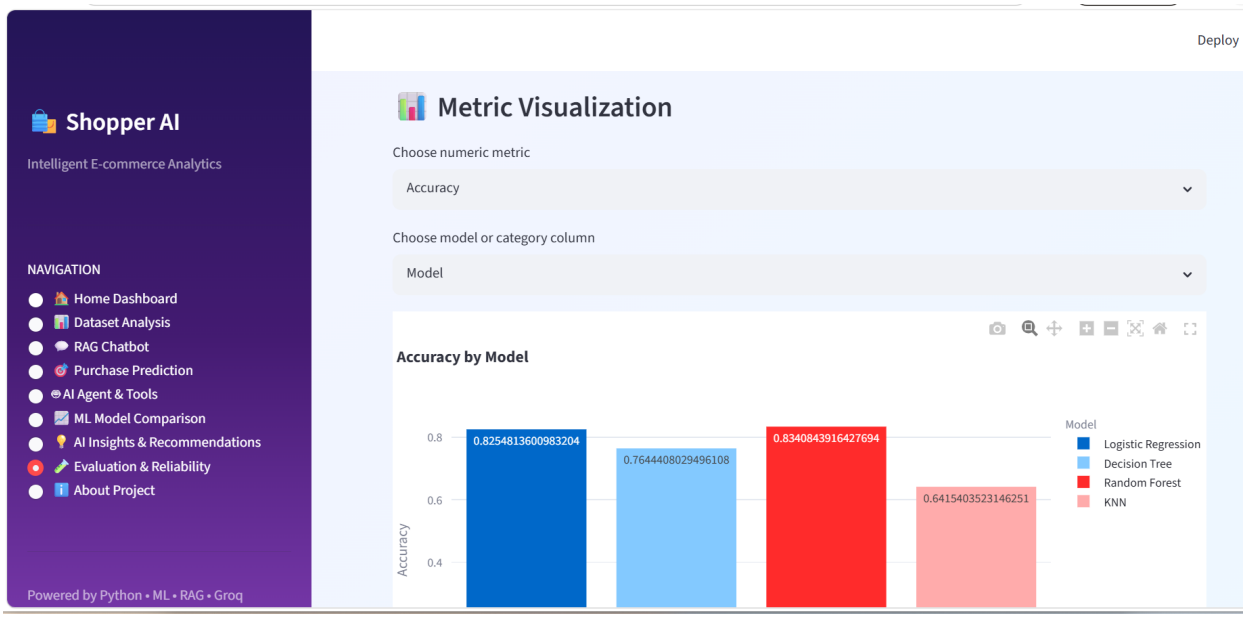

The workflow connects data preparation, model training, PDF-based retrieval, analysis, prediction, and the Streamlit interface.

16. Final Application View

The screenshots collectively document the working application pages and their main functions.

17. Application Screenshot 17

This screenshot documents another view of the developed Shopper AI application.
